

# PRODUCT BULLETIN

**SUBJECT SPRAYSTOP FG Standard Fiberglass Paint Arrestor Bulletin No.PB-693-1**

### General Construction

**SprayStop FG** is designed specifically for economical Paint Overspray collection. The media is approximately 2" thick and is constructed of thousands of continuous filament glass fibers formed into a progressively dense blanket or pad. This graduated density forces paint particles to permeate the entire filter pad from back to front. Full depth loading provides longer service life and less downtime.

The upstream side of **SprayStop FG** is white in color, while the downstream side is tinted green to insure correct installation.

**SprayStop FG** utilizes a unique thermoset bonding resin which provides superior compression strength. This specialized component allows each pad to spring back to full thickness upon removal from the carton. Superior resiliency means the product can be bulk packaged, resulting in low storage space requirements and better coatings collection performance.

### Recommended Application

**SprayStop FG** is an excellent paint arrestor for all types of paints and coatings. This media effectively removes overspray solids from lacquers, air dry enamels, and bake enamels.

### Availability

**SprayStop FG** is available in 2" thick precut pads, service rolls, and economical bulk rolls. The media is completely and easily interchangeable with other paint arrestor medias.
