

BioMAX HEPA-Lock Housing

The **BioMAX HEPA Lock Housing** is constructed of 16 gauge galvanized steel. It is also available in aluminized, stainless steel and epoxy coating, which provides superior corrosion and heat resistance.

The housings are constructed with two bolt-on doors. These doors are pin type and designed to withstand positive and negative pressure. They are produced with a closed cell neoprene gasket, which allows for an airtight seal. The easy turn hand knobs make the doors removeable. BioMAX HEPA Lock Housings are constructed with outer flanges for easy connection to ductwork.

BioMAX HEPA-Lock Housing units can be equipped to accommodate 2" or 4" nominal prefilters.
